Company Overview

Strategic Systems, Inc., is a Dublin Ohio based, Information Technology firm. Over the past 14 years we have established ourselves as a firm that designs, develops, and implements innovative digital transformation, systems modernization, and talent augmentation services. Our clients are primarily large and medium, mid-west based manufacturing and industrial engineering firms, insurance companies, banks and financial institutions, and state and local governments.

Our mission is to improve our client's market competitiveness, and to create new value streams for their businesses by developing innovative technology solutions and providing world class talent as and when they are needed. We do this by investing in our people and giving them the tools and support they need to remain on the cutting edge of technology, leveraging leading edge technologies and industry best practices to develop effective and efficient solutions that lead to transformative improvements to the business.

Our Approach

Our approach modernizes clients' business model into a modern, agile, and competitive digital business model. The goal is to achieve digital transformation that results in sustainable competitive advantages and added value to customers. Our approach focuses on transforming how organizations (1) use data to gain valuable insights and become more predictive and less reactive to customer and market changes, (2) execute business processes and transactions so that they are faster, more effective and efficient, and less error prone, (3) assess and manage their technical debt and modernizing technology and software assets to align with the business's goals, and (4) invest in managing their skills deficit, and aligning resource and organizational capabilities with the goals of the organization.

Offerings and Services

Digital transformation of the organizations business model is a top priority for business leaders that rely on technology and best practices to increase customer value and increase competitive advantage in a rapidly evolving, and dynamic digital marketplace. We specialize in designing and implementing digital transformation strategies that achieve these outcomes, and focus our services in the following areas:

Machine Learning and Data Analytics (MLDA).

MLDA is designed to give our clients access to the latest techniques, tools, and capabilities that deliver actionable insights to improve their business. Uniquely MLDA services are offered either a subscription model, or on a fixed scope, deliverable based project basis.

The subscription model gives our clients access to a professional team of data scientists, data analysts, and engineers, as well as the tools necessary to provide real business insights, and recommendations quickly and efficiently. MLDA subscription services' value is it provides immediate, responsive, scalable, and sophisticated modeling expertise without capital expenditures, long ramp up times, or disruptions to the business.

Robotic Process Automation (RPA) and Process Transformation.

For organizations seeking incremental or transformational improvements to their business model, we offer business process transformation services designed to improve productivity of internal resources and improve accuracy and efficiency of conventional legacy business processes. Using best practices and industry standard techniques, coupled with the latest intelligent process mapping, and RPA technology, we achieve substantial improvements across the critical functions of our client's business.

Our RPA services are available for specific automation tasks or requirements, on a per Robot basis, or can be deployed as an onsite capability that our clients can support post implementation. We have found that often our clients have specific business processes that benefit from redesign and redeployment using robots, and choose to have us design, develop, implement, and monitor the robots from within our Center for Advanced Technology & Innovation (CATI).

About Us

We are growing, we are investing, and we are determined to be your business enablement partner. Our purpose is to be a transformation agent who enables our client's digital business model.

We work relentlessly to make a difference for our clients. Our passion is fueled by our enthusiasm for innovation and advanced technologies. Each of the 250+ men and women that call Strategic "home" are fiercely competitive, naturally inquisitive, and value our client's loyalty.

We invest in keeping our people trained on the latest technologies and skills. We invest resources in developing deep and relevant knowledge, and expertise in the industries that our clients engage.

Systems and Applications Modernization Services.

Our unique modernization services allow us to refactor legacy mainframe applications into agile, modern, scalable, and cost-effective applications. Whether our clients are facing platform or software obsolescence, challenges finding skilled resource to maintain and support their legacy environment, or are considering moving applications to the cloud, our modernization services are designed to quickly, safely, and cost efficiently meet these needs. We use a unique, fully automated technique and solution that almost halves the time it typically takes other vendors to refactor enterprise grade legacy applications, while reducing the cost of the effort by approximately 66%.

Enterprise Resource Planning Managed Services.

The primary reason our clients look to us to provide managed services is because we perform the function more effectively and efficiently than internal resources. Added benefits include overall reduction in cost, higher quality service, significantly higher service levels than even their own support team can provide. We currently support and maintain 2 of the most widely used ERP solutions globally, J.D. Edwards, and Oracle Enterprise Business Suite ERP systems in our Development Center of Excellence. We offer flexibility in the engagement model, providing resources on a time and material basis that may be managed by our client's resources, or on a fixed scope or deliverable basis as a monthly subscription fee.

Talent Augmentation Services.

We provide information technology, engineering, and non-technical staff augmentation services to fill critical skills gaps for our clients. One of our core competencies is talent acquisition and recruiting. Our reputation for assessing, onboarding, training and retaining top information technology talent is second to none. We use this capability to ensure that we retain the most loyal, and capable resources with advanced technology skills. Also, we use our leading talent acquisition capabilities to recruit the right resources, with the highest skills available for our clients that need them. We also provide change management consulting, and IT organizational re-design services.

Unique Capabilities and Differentiators

Center for Advanced Technology and Innovation (CATI)

CATI exists to create and execute bold ideas and advanced applied technologies, that help our clients capture and maintain a competitive advantage. CATI is a unique, state-of-the-art facility that offers our clients a collaborative environment where our data scientists, senior technologists, consultants, and business analysts can work together with our client's teams to solve businesses' mission critical challenges in innovative ways.

CATI gives us and our clients a means to investigate the future—envisioning transformational technologies and applications of current technologies that will redefine how work gets done and add value to the end customer. Located in Dublin, Ohio, CATI is another way that Strategic Systems is dedicated to helping our clients achieve their vision.

Delivery Center of Excellence (DCE)

The DCE functions as our Agile software development center where we execute our software development programs, and as our managed services execution center where we execute our managed services programs. Our delivery best practices, software development standards, project artifact and template portfolios, agile development teams of software engineers, and quality assurance teams and other consultants with specialized skills are managed and administered at our DCE.

The DCE is staffed with certified scrum masters and scrum teams that operate during our clients' regular business hours, or however the client chooses to have resources deployed. Additionally, we provide the flexibility for our clients to manage the team to the degree that they desire. We have clients that use their development managers and senior business staff manage our resources directly, while other clients choose to give us specific scope of work and want our scrum masters manage the process.
